ABSTRACT OF THE DISCLOSURE

A method for creating and using computer passwords includes the steps of displaying graphic objects on the display, selecting a plurality of the graphic objects and designating them as a password, applying the password to lock and

5   password-protect a further graphic object, whereby the further graphic object cannot be accessed unless the password is first used to unlock the protected object. The combinatorial possibilities of the password includes the categories of the plurality of objects, the colors of the plurality of objects, and the spatial arrangement of the plurality of objects.
